#### **DETAILED ACTION**

Page 2

### **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Information Disclosure Statement

The submitted IDS documents have been reviewed and made of record.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP2003-288733 further considered with JP 2001-209966 and all further considered with both JP 210-222865 and JP 05-242514...

The examiner is supplying MAT (machine assisted translations of the above JP documents for the benefit of applicant's counsel/representative).

As noted in the JP 2003-288733 document, see for instance paragraph 55 and figure 7 a 3 beam laser optical system with the recited wavelengths is known.

There is no clear depiction of all the mundane mechanical components recited in claim 3 however, nor is the axial shift depicted.

Art Unit: 2627

JP 2001-209966 not only discloses – see the entire document – a similar 3 beam system, but also the mechanical components necessary for such an optical system to interface with a recording record for recording/reproducing information to/from such record.

JP 10-222865 teaches in this environment – see the abstract as well as 14, 72,102, the second claim and fig. 1 for instance - the ability of shifting the axis of the emitted beam within a particular range.

JP 05-242514 also teaches in this environment the ability of shifting the optical axis of multiple beams to ensure signal separation, i.e., reducing cross talk between such beams.

It would have been obvious to modify the base system of JP2003-288733 with the above noted teachings from the secondary references/systems, motivation is to provide not only for the particular mechanical components for movement of the optical system in this environment, but also in order to shift the optical axis of the beams, motivation is to ensure proper signal separation.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shimoda teaches in this environment the ability of shifting appropriate tracking beams with respect to the tracking direction.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aristotelis M. Psitos whose telephone number is (571) 272-7594. The examiner can normally be reached on M-Thr: 6:00 - 3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William R. Korzuch can be reached on (571) 272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
